BARCLAY PATHFINDER 5 gives effective control of slugs and snails and contains an effective animal repellent Bitrex®

For use only as an agricultural and horticultural molluscicide in field crops, vegetables, fruit crops, ornamentals and glasshouse crops.

Crop	Maximum individual dose	Maximum number of applications	Maximum total dose	Specific pests controlled
All edible and non-edible crops	18 kg/ha	-	-	slugs

Latest time of application: Not applicable

RISK AND SAFETY INFORMATION

Harmful to aquatic organisms. Keep locked up and out of reach of children. Keep away from food, drink and animal feed. Wash hands before meals and after work. Dangerous to game, wild birds and animals. Keep children, pets and animals away from treated areas for at least 7 days. Do not contaminate ponds, waterways or ditches with chemical or used container. Do not re-use container for any other purpose and dispose of safely.

To avoid risks to man and the environment, comply with the instructions for use. PCS No: 92372

Instructions for use

Apply BARCLAY PATHFINDER 5 as a broadcast application to bare soil and on all edible and non-edible crops through any suitable granule or fertiliser applicator, or by hand-held scoop. It is important to ensure an even spread of the pellets approximately 10cm apart.

Varieties of oilseed rape low in glucosinolates can be more acceptable to slugs than single low varieties. The efficacy of this product to these varieties has not been established.

Time of application

BARCLAY PATHFINDER 5 pellets should be broadcast as soon as slugs or snails are active in the field.

The pellets are best applied during mild weather preferably before a dry and sunny day. They should not be applied just before rain. In drilled crops, such as peas and potatoes, the pellets should be applied pre-drilling in early spring. The application should be repeated as necessary after crop emergence if slug attack is heavy. Under glass, keep soil dry for a few days after application. Late application of pellets to broad-leaved plants may result in lodging of the pellets in foliage. Care should be taken to avoid this when making applications to edible crops.
