

HOLD UP

Plant Growth Regulator (MAPP 11365)

Contains
700 g/l chlormequat
in aqueous solution

HOLD UP is a plant growth regulator to increase resistance to lodging in winter and spring cereals.

Key Benefits

- **Established straw shortener and anti-lodging agent**
Protects against the losses of yield and quality due to lodging
- **Use across wheat, barley and oat crops**
One product for all the major cereal crops
- **Can be used on under-sown crops**
But check compatibility with other products before application
- **Split applications possible up to a maximum total dose of 2.3 l/ha**
For maximum manipulation of crop height
- **Available in 20 litre cans**
Speeding sprayer filling times

Summary of Directions for use

- Approved for winter and spring wheat, winter and spring oats and winter barley
- Maximum individual dose 2.3 l/ha in winter crops and winter and spring oats
- Maximum total dose 2.3 l/ha in all crops
- Latest time of application Z32 in winter and spring wheat, Z33 in oats and Z31 in barley

Best Use

- Best results are obtained from actively growing, well managed crops
- Avoid applications to wet crops or when rain is due
- On oats add an approved non-ionic wetting agent

*Hold Up contains chlormequat.
Always read the label: use pesticides safely.*
