

Key Benefits

- **Pre or post-emergence application controls annual and perennial grasses**
These grow fast and can rapidly choke new plantings
- **Controls a wide range of broad-leaf weeds**
Reducing the need for other products to be used and easing the control programme
- **Can be used on ornamental beds of roses, shrubs and trees**
Safe when established for one season
- **Can be applied in a range of application equipment**

Contains
4% propyzamide as
a granule

KERB GRANULES
is a residual
herbicide for the
control of grasses
and broad-leaf
weeds in forestry
and amenity
plantings.

Summary of Directions for use

- Approved for forestry and amenity vegetation
- Apply between October and February
- Maximum of one application per year
- Maximum individual dose 3.8 gms per square metre

Best Use:

- Apply in cool moist soil conditions and particularly during a period of cool weather after application
- Crop selectivity is generally excellent but with new varieties test on a small batch to ensure safety

*Kerb Granules contain propyzamide.
Always read the label: use pesticides safely.*
